Hawaiian Gazette.

TUESDAY, MARCH 19, 1896.

In the Supreme Court of the Hawaiian Islands—In Banco, January Term, 1896.

REX VS. AN SING.

Before JUSTICE G. C. MOTTLE and JUSTICE J. S. HARRIS.

The defendant was convicted in the Police Court of Honolulu of the offense of having

possessed of a certain quantity of opium, and

of having sold the same to one AN SING, who

was also convicted of the same offense, and

of having sold the same to one AN SING, who

was also convicted of the same offense, and

of having sold the same to one AN SING, who

was also convicted of the same offense, and

of having sold the same to one AN SING, who

was also convicted of the same offense, and

of having sold the same to one AN SING, who

was also convicted of the same offense, and

of having sold the same to one AN SING, who

was also convicted of the same offense, and

of having sold the same to one AN SING, who

was also convicted of the same offense, and

of having sold the same to one AN SING, who

was also convicted of the same offense, and

of having sold the same to one AN SING, who

was also convicted of the same offense, and

of having sold the same to one AN SING, who

was also convicted of the same offense, and

of having sold the same to one AN SING, who

was also convicted of the same offense, and

of having sold the same to one AN SING, who

was also convicted of the same offense, and

of having sold the same to one AN SING, who

was also convicted of the same offense, and

of having sold the same to one AN SING, who

was also convicted of the same offense, and

of having sold the same to one AN SING, who

was also convicted of the same offense, and

of having sold the same to one AN SING, who

was also convicted of the same offense, and

of having sold the same to one AN SING, who

was also convicted of the same offense, and

of having sold the same to one AN SING, who

was also convicted of the same offense, and

of having sold the same to one AN SING, who

was also convicted of the same offense, and

of having sold the same to one AN SING, who

was also convicted of the same offense, and

of having sold the same to one AN SING, who

was also convicted of the same offense, and

of having sold the same to one AN SING, who

was also convicted of the same offense, and

of having sold the same to one AN SING, who

was also convicted of the same offense, and

of having sold the same to one AN SING, who

was also convicted of the same offense, and

of having sold the same to one AN SING, who

was also convicted of the same offense, and

of having sold the same to one AN SING, who

was also convicted of the same offense, and

of having sold the same to one AN SING, who

was also convicted of the same offense, and

was also convicted of the same offense, and

of having sold the same to one AN SING, who

was also convicted of the same offense, and

of having sold the same to one AN SING, who

Sugar on American Soil.

The address of Hon. Norman J. Colman,

President of the Hawaiian Sugar Planters' Association, before that body at St. Louis,

being a brief history of the experiments

conducted at Ottawa, Kan., last autumn by the Department of Agriculture.

"The fact," he said, "that the ordinary

process of pressure does not seem much

over half the sugar in the cane has long

been a source of serious consideration with

those who have studied the sugar problem

from an economic point of view. That so

large a percentage of the raw material

should be lost is not only regrettable to the

economic section, but it is also a serious

disadvantage to the sugar industry, in

order to hold its place in the sharp

competition of the market, must prevent

her losses, in some way, the losses which

it has suffered in the past.

In respect of sorghum losses may be

classified under the following heads:

Loss of sugar due to imperfect extraction

from the cane; by purification of the juice;

by waste in scums; loss of seeds and

blades, and loss of bagasse. In this con-

nection only the first and second of these

sources of loss will be considered, and the

rest reserved for discussion on some other

occasion.

It might at first appear that the loss

due to imperfect extraction might be

avoided by a more perfect construction of

the rolls or by displacing them. It is

true that much can be saved in this way.

A heavy mill with its rolls set iron to iron

and driven by heavy engines, better

engines will certainly increase the per-

centage of extraction. Still more is this

the case when the mill is duplicated, and

the juice is pressed a second time. But

the use of such a mill is not practical

for the sugar grower, because of the

expense of such a mill, and the fact that

the juice is so much more difficult to

extract from the cane than it is from the

sorghum. The use of such a mill is not

practical for the sugar grower, because of

the expense of such a mill, and the fact

that the juice is so much more difficult

to extract from the cane than it is from

the sorghum. The use of such a mill is

not practical for the sugar grower, be-

cause of the expense of such a mill, and

the fact that the juice is so much more

difficult to extract from the cane than it

is from the sorghum. The use of such a

mill is not practical for the sugar grower,

because of the expense of such a mill, and

the fact that the juice is so much more

difficult to extract from the cane than it

is from the sorghum. The use of such a

mill is not practical for the sugar grower,

because of the expense of such a mill, and

the fact that the juice is so much more

difficult to extract from the cane than it
